

Course Code	Course Title	Credit
CSC801	Advanced Artificial Intelligence	3

Prerequisite: Engineering Mathematics, Data Structures and Algorithm, Python Programming

Course Objectives:

1	To relate with the basic concepts of Probabilistic Models.
2	To understand the scope of Generative Networks in the field of AI.
3	To recognize various components of Autoencoder Architecture and Training process.
4	To learn the fundamentals of Transfer Learning.
5	Provide students with a comprehensive understanding of ensemble methods and their applications.
6	To explore the nascent applications of AI

Course Outcomes: After successful completion of the course student will be able to

1	Acquire basic knowledge of Probabilistic Models.
2	Analyze the working and architecture for Generative Networks.
3	Interpret various components and various types of Autoencoders
4	Understand various aspects of Transfer Learning.
5	Apply ensemble learning techniques to real-world problems and demonstrate improved predictive performance.
6	Relate to the nascent technologies in the field of artificial intelligence.

Module	Content	Hrs
1.0	Generative and Probabilistic Models	08
	<p>1.1 Introduction: Overview of generative models and their importance in AI, Fundamentals of Probability theory and generative modeling, Introduction to GANs, VAEs and other generative models. Significance of generative models, Challenges with generative models.</p> <p>1.2 Probabilistic Models: Gaussian Mixture Models (GMMs), Hidden Markov Models (HMMs), Bayesian Networks, Markov Random Field (MRFs), Probabilistic Graphical Model.</p>	
2.0	Generative Adversarial Network	07
	<p>2.1 Basics of GAN : Generative Adversarial Networks (GANs) architecture, The discriminator model and generator model, Architecture and Training of GANs, Vanilla GAN Architecture. GAN variants and improvements (DCGAN, WGAN, Conditional GAN, CycleGAN), Challenges- Training instability and model collapse, GAN applications in image synthesis and style transfer.</p>	
3.0	Variational Autoencoders	07

	<p>3.1 Introduction: Basic components of Variational Autoencoders(VAEs), Architecture and training of VAEs the loss function, Latent space representation and inference, Applications of VAEs in image generation.</p> <p>3.2 Types of Autoencoders: Undercomplete autoencoders, Sparse autoencoders, Contractive autoencoders, Denoising autoencoders, Variational Autoencoders (for generative modelling)</p>	
4.0	Transfer Learning	05
	<p>4.1 Introduction to transfer learning Basic terminologies, Pre-trained model and data sets, Feature extraction and fine tune transfer learning , Recent advancement in transfer learning : self-supervised learning and meta learning.</p>	
5.0	Ensemble learning	06
	<p>5.1 Ensemble Classifiers: Introduction to Ensemble Methods. Bagging and random forests, Boosting algorithms: AdaBoost Stacking and Blending Models, Extreme Gradient Boosting (XGBoost): XGBoost Regression and classification.</p>	
6.0	Nascent Technologies in AI	06
	<p>6.1 Ensemble Classifiers: Limitations of 2D Learning Environments, Evolution of virtual worlds and immersive technologies, Definition and concepts of Augmented Reality, Definition and concept of the Metaverse, Characteristics and components of the Metaverse, Challenges and opportunities in the Metaverse ecosystem, AI in the realm of emerging quantum paradigms.</p>

<u>Assessment:</u>	
Internal Assessment:	
Assessment consists of two class tests of 20 marks each. The first class test is to be conducted when approx. 40% syllabus is completed and second class test when additional 40% syllabus is completed. Duration of each test shall be one hour.	
End Semester Theory Examination:	
1	Question paper will comprise of total six questions.
2	All question carries equal marks
3	Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
4	Only Four question need to be solved.
5	In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.

Course Code	Course Name	Total
CSDO8011	AI for financial & Banking application	03

Course Objectives:

Course Objectives	
1	To understand the impact of technology and digitization on financial and banking enterprises.
2	To explore blockchain technologies in the financial sector.
3	To examine digital money transfer mechanisms and GIFT cities.
4	To evaluate the benefits of digitization and cloud services in banking.
5	To analyze enterprise software solutions for financial operations.
6	To study the integration of AI in banking processes

Course Outcomes	
On successful completion, of course, learner/student will be able to:	
1	Gain knowledge of technology's influence on financial and banking enterprises.
2	Understand the applications of blockchain in the financial sector.
3	Recognize digital money transfer mechanisms and its role in digitization
4	Evaluate the advantages of digitization and cloud services in banking.
5	Analyze enterprise software solutions for financial operations.
6	Explore the integration of AI in banking processes.

Sr. No.	Module	Detailed Content	Hours
1		Information Technology Infrastructure and Digitization of Financial Banking Enterprises	4
	1.1	Digital Technology driven processes, BlockChain technologies for Financial – Banking sector, GIFT citie Digital Money Transfer Mechanisms Digitization/ cloud services and solutions in banking and financial services; Profiling enterprise software’s in financial and banking enterprises. Building Efficiencies, productivity, and infallibility in financial & Banking operations Detailed study of various processes which shall be transformed by AI integration in banking and financial services.	
	1.2	Self-learning : Introduction to business efficiencies, industrial productivity and high degree reliability systems for competitive advantage and carbon-neutral enterprises.	
2		Financial Statistics and The Sharpe Ratio	7
	2.1	Probability, Combinatorics, Mathematical Expectation, Sample Mean Standard Deviation, and Variance ,Sample Skewness and Kurtosis, Sample Covariance and Correlation ,Financial Returns ,Capital Asset Pricing Model ,Sharpe Ratio Formula, Time Periods and Annualizing, Ranking Investment Candidates, The Quant mod Package, Measuring Income Statement Growth, Sharpe Ratios for Income Statement Growth	

3		Cluster Analysis	7
	3.1	K-Means Clustering, Dissecting the K-Means Algorithm Sparsity and Connectedness of Undirected Graph Covariance and Precision Matrices Visualizing Covariance, The Wishart distribution Glasso Penalization for Undirected Graphs, Running the GlassoAlgorithm, Tracking a Value Stock through the Years Regression on Yearly Sparsity , Regression on Quarterly Sparsity , Regression on Monthly Sparsity	
4		Gauging the Market Sentiment	7
	4.1	Markov Regime Switching Model, Reading the Market Data, Bayesian Reasoning, The Beta Distribution , Prior and Posterior Distributions Examining Log Returns for Correlation ,Momentum Graphs ,Simulating Trading Strategies , Foreign Exchange Markets , Chart Analytics Initialization and Finalization , Momentum Indicators , Bayesian Reasoning within Positions , Entries , Exits , Profitability,, Short-Term Volatility, The State Machine.	
5		Trading Algorithms	7
	5.1	Vectorized Backtesting, Backtesting an SMA-Based Strategy, Backtesting a Daily DNN-Based Strategy Backtesting an Intraday DNN-Based Strategy , Risk Management : Trading Bot , Vectorized Backtesting Event-Based Backtesting ,Assessing Risk , BacktestingRisk Measures , Stop Loss , Trailing Stop Loss , Take Profit	
6		Fraud Analytics	7
	6.1	Introduction , The Analytical Fraud Model Life Cycle , Model Representation , Traffic Light Indicator Approach, Decision Tables, Selecting the Sample to Investigate, Fraud Alert and Case Management, Visual Analytics, Backtesting Analytical Fraud Models : Backtesting Data Stability, Backtesting Model Stability, Backtesting Model Calibration , Model Design and Documentation	

Textbooks:

Course Code	Course Title	Credit
CSDO8012	Quantum Computing	3

Prerequisite: Engineering Mathematics, Data Structures and Algorithm, Python Programming		
Course Objectives:		
1	To understand basics of quantum computing	
2	To understand mathematics required for quantum computing	
3	To understand building blocks of quantum computing and design algorithms	
4	To understand quantum hardware principles and tools for quantum computing.	
Course Outcomes: After successful completion of the course student will be able to		
1	Understand basic concepts of quantum computing	
2	Illustrate building blocks of quantum computing through architecture and programming models.	
3	Appraise various mathematical models required for quantum computing	
4	Discuss various quantum hardware building principles.	
5	Identify the various quantum algorithms	
6	Describe usage of tools for quantum computing.	
Module	Content	Hrs
1.0	Introduction to Quantum Computing	7
	1.1 Motivation for studying Quantum Computing Origin of Quantum Computing Quantum Computer vs. Classical Computer Introduction to Quantum mechanics Overview of major concepts in Quantum Computing 1.2 Qubits and multi-qubits states Bloch Sphere representation Quantum Superposition Quantum Entanglement Major players in the industry (IBM, Microsoft, Rigetti, D-Wave etc.)	
2.0	Mathematical Foundations for Quantum Computing	05
	2.1 Matrix Algebra: basis vectors and orthogonality, inner product and Hilbert spaces, matrices and tensors, unitary operators and projectors, Dirac notation, Eigen values and Eigen vectors.	
3.0	Building Blocks for Quantum Program	08

	3.1	Architecture of a Quantum Computing platform Details of q-bit system of information representation: Block Sphere Multi-qubits States Quantum superposition of qubits (valid and invalid superposition) Quantum Entanglement Useful states from quantum algorithmic perspective e.g. Bell State Operation on qubits: Measuring and transforming using gates. Quantum Logic gates and Circuit No Cloning Theorem and Teleportation	
	3.2	Programming model for a Quantum Computing Program Steps performed on classical computer Steps performed on Quantum Computer Moving data between bits and qubits.	
4.0		Quantum Algorithms and Error correction	06
	4.1	Quantum Algorithms, Shor's Algorithm, Grover's Algorithm. Deutsch's Algorithm, Deutsch-Jozsa Algorithm	
	4.2	Quantum error correction using repetition codes 3 qubit codes, Shor's 9 qubit error correction Code	
5.0		Quantum Hardware	10
	5.1	Ion Trap Qubits ,The DiVincenzo Criteria , Lagrangian and Hamiltonian Dynamics in a Nutshell: Dynamics of a Translating Rotor	
	5.2	Quantum Mechanics of a Free Rotor: A Poor Person's Atomic Model: Rotor Dynamics and the Hadamard Gate, Two-Qubit Gates	
	5.3	The Cirac-Zoller Mechanism: Quantum Theory of Simple Harmonic Motion, A Phonon-Qubit Pair Hamiltonian, Light-Induced Rotor-Phonon Interactions, Trapped Ion Qubits, Mølmer-Sørensen Coupling ..	
	5.4	Cavity Quantum Electrodynamics (cQED): Eigenstates of the Jaynes-Cummings Hamiltonian Circuit QED (cirQED): Quantum LC Circuits, Artificial Atoms, Superconducting Qubits Quantum computing with spins: Quantum inverter realized with two exchange coupled spins in quantum dots, A 2-qubit spintronic universal quantum gate.	
6.0		OSS Toolkits for implementing Quantum program	03
	6.1	IBM quantum experience Microsoft Q Rigetti PyQuil (QPU/QVM)

Course Code:	Course Title	Credit
CSDO8013	Reinforcement Learning	3

Prerequisite: Probability distributions and expected values, and basic linear algebra	
Course Objectives:	
1	Define the key features of reinforcement learning that distinguishes it from AI and non-interactive machine learning.
2	Introduction to statistical learning techniques where an agent explicitly takes actions and interacts with the world.
3	Implement in code common RL algorithms.
4	Describe multiple criteria for analyzing RL algorithms & evaluate algorithms on these metrics: e.g. regret, Sample complexity, computational complexity, empirical performance, convergence, etc.
5	Know how to implement dynamic programming as an efficient solution approach to an industrial control problem.
6	Explore solutions to the Exploration-Exploitation Dilemma.
Course Outcomes:	
1	Learn how to define RL tasks and the core principles behind the RL, including policies, value functions, deriving Bellman equations.
2	Evaluate work with tabular methods to solve classical control problems.
3	Apply Markov Decision Processes to solve real-world problems.
4	Understand the dynamic programming for policy Evaluation.
5	Implement reinforcement learning problems based on averaging sample returns using Monte Carlo method.
6	Recognize current advanced techniques and applications in RL.

Module	Content	Hrs
0	Prerequisite	2
	Probability distributions and expected values, and basic linear algebra (e.g., inner products).	
1	Introduction to Reinforcement Learning:	4
	1.1 Reinforcement Learning: Key features and Elements of RL, Types of RL, rewards. Reinforcement Learning Algorithms: Q-Learning, State Action Reward State action (SARSA).	
2	Bandit problems And. online Learning	7

	2.1	An n-Armed Bandit Problem, Action-Value Methods Tracking a Nonstationary Problem, Optimistic Initial Values Upper-Confidence-Bound Action Selection Gradient Bandits	
3		Markov Decision Processes	7
	3.1	The Agent–Environment Interface, The Agent– Environment Interface, Goals and Rewards, Returns, Markov properties, Markov Decision Process, Value Functions and Optimal Value Functions,	
4		Dynamic Programming	7
	4.1	Policy Evaluation (Prediction), Policy Improvement, Policy Iteration, Value Iteration, Asynchronous Dynamic Programming, Generalized Policy Iteration	
5		Monte Carlo Methods and Temporal- Difference Learning	7
	5.1	Monte Carlo Prediction, Monte Carlo Estimation of Action Values, Monte Carlo Control, TD Prediction, TD control using Q-Learning	
6		Applications and Case Studies	5
	6.1	Elevator Dispatching, Dynamic Channel Allocation, Job-Shop Scheduling	

Textbooks:

Course Code	Course Name	Credit
CSDO8021	Graph Data Science	03

Sr. No	Course Objectives
1	To Understand the basics of graphs, including definitions, connectivity, and properties.
2	To Explore the use of graphs in solving puzzles and optimization problems.
3	To Learn about the advantages of graph databases over relational and NoSQL databases.
4	To Gain knowledge of data modeling with graphs, including the labeled property graph model.
5	To Develop skills in building graph database applications, including data modeling and testing.
6	To Explore real-world use cases and understand non-functional characteristics of graph databases.

Sr. No	Course Outcomes
On successful completion, of course, learner/student will be able to:	
1	Demonstrate a solid understanding of graph concepts and properties.
2	Apply graph algorithms to solve puzzles and optimization problems.
3	Compare graph databases with relational and NoSQL databases.
4	Model data using the labeled property graph model and avoid common pitfalls.
5	Build graph database applications with proper data modeling and testing.
6	Analyze and implement graph database solutions for real-world use cases, considering non-functional characteristics

DETAILED SYLLABUS:

Sr. No.	Module	Detailed Content	Hours
1		Introduction to Graph	4
	1.2	Definitions and examples, Three puzzles, Paths and cycles, Connectivity, Eulerian graphs, Hamiltoniangraphs, shortest path, Chinese postman problem, travelingsalesman problem, trees, properties of trees	
2		Introduction Graph Databases	7
	2.1	A High-Level View of the Graph Space, Graph Databases, Graph Compute Engines, The Power of Graph Databases, Performance, Flexibility, Agility, Options for Storing Connected Data, Relational Databases Lack Relationships, NOSQL Databases Also Lack Relationships, Graph databases embraces relationship	
3		Data Modelling with Graphs	7
	3.1	Models and Goals, The Labelled Property Graph Mode Querying Graphs, A Comparison of Relational and GraphModelling, Cross-Domain Models, Common Modelling Pitfalls, Identifying Nodes and Relationships, Avoiding Anti-Patterns	
4		Building a Graph Database Application	7
	4.1	Data Modelling , Application Architecture ,Testing, Capacity Planning, Importing and Bulk Loading Data .	
5		Graphs in the Real World	7
	5.1	Organizations Choose Graph Databases, Common Use Cases, Real-World Examples, Authorization and Acces Control, Geospatial and Logistics, Graph Database Internals, Native Graph Processing, Native Graph StorageProgrammatic APIs, Kernel API, Core API, Traversa Framework, Non-functional Characteristics	
6		Case Study	7

	6.1	Neo4j – About, Neo4j – Installation, Neo4j – Browser Neo4j - Query Language (Cypher) , Neo4j – Create a Node Neo4j - Create a Relationship, Neo4j - Create an Index Neo4j - Create a Constraint , Neo4j - Select Data with MATCH, Neo4j - Import Data from CSV, Neo4j - Drop an Index, Neo4j - Drop a Constraint, Neo4j - Delete a Node, Neo4j - Delete a Relationship

Course Code:	Course Title	Credit
CSDO8022	Recommendation Systems	3

Prerequisite: Artificial Intelligence and Machine Learning, Basic knowledge of Python	
Course Objectives:	
1	To introduce Recommendation systems and it's basic concepts.
2	To understand design and working of Collaborative Filtering based recommendation.
3	To analyze design and working of Content-based recommendation.
4	To understand design and working of Knowledge based recommendation.
5	To understand design and working of Ensembled- Based and Hybrid Recommendation Systems.
6	To identify the methods for evaluation of recommendation systems.
Course Outcomes: After successful completion of the course student will be able to	
1	To have a broad understanding of the field of Recommendation Systems.
2	In-depth Knowledge of the architecture and models for Collaborative Filtering.
3	Understanding the architecture and working of Content based recommendation systems.
4	Understanding the architecture and basics of Knowledge based recommendation systems.
5	Analyzing hybrid and ensembles recommendation systems.
6	Evaluation of recommendation systems by selecting right evaluation parameter.

Module	Content	Hrs
1.0	Introduction to Recommendation System	06
	1.1 History of recommendation system, Eliciting Ratings and other Feedback Contributions, Implicit and Implicit Ratings, Recommender system functions.	
	1.2 Linear Algebra notation: Matrix addition, Multiplication, transposition, and inverses; covariance matrices, Understanding ratings, Applications of recommendation systems, Issues with recommender system.	
2.0	Collaborative Filtering	06
	2.1 Architecture of Collaborative Filtering, User-based nearest neighbour recommendation, Item-based nearest neighbour recommendation, Model based and pre-processing based approaches, Clustering for recommendation system, Attacks on collaborative recommender systems, Advantages and drawbacks of Collaborative Filtering.	

3.0		Content-based recommendation	07
	3.1	Architecture of content-based systems, Content representation and content similarity, Item profiles, Discovering features of documents, Obtaining item features from tags, Representing item profiles, Methods for learning user profiles, Similarity based retrieval, The Role of User Generated Content in the Recommendation Process.	
	3.2	Bayes classifier for recommendation, Regression based recommendation system. Advantages and drawbacks of content-based filtering	
4.0		Knowledge based recommendation	06
	4.1	Knowledge representation and reasoning, Constraint based recommenders, Case based recommenders, Persistent Personalization in Knowledge-Based Systems, Conversational Recommendation. Search based recommendation, Navigation-based recommendation.	
5.0		Ensembled- Based and Hybrid Recommendation System	06
	5.1	Opportunities for hybridization, Monolithic hybridization design: Feature combination, Feature augmentation, Parallelized hybridization design: Weighted, Switching, Mixed, Pipelined hybridization design: Cascade Meta-level, Limitations of hybridization strategies.	
6.0		Evaluating Recommendation System	08
	6.1	Characteristics and properties of evaluation research, Evaluation design goals- Accuracy, Coverage, Confidence and Trust, Novelty, Serendipity, Diversity, Robustness, Stability and Scalability.	
	6.2	Comparison between evaluation design of classification model and recommendation system, Error metrics, Decision-Support metrics, User-Centred metrics. Comparative analysis between different types of recommendation systems.

Course Code	Course Name	Credit
CSDO8023	Social Media Analytics	03

Prerequisite: Graph Theory, Data Mining, Python/R programming

Course Objectives: The course aims:

1	Familiarize the learners with the concept of social media.
2	Familiarize the learners with the concept of social media analytics and understand its significance.
3	Enable the learners to develop skills required for analyzing the effectiveness of social media.
4	Familiarize the learners with different tools of social media analytics.
5	Familiarize the learner with different visualization techniques for Social media analytics.
6	Examine the ethical and legal implications of leveraging social media data.

Course Outcomes:

1	Understand the concept of Social media
2	Understand the concept of social media Analytics and its significance.
3	Learners will be able to analyze the effectiveness of social media
4	Learners will be able to use different Social media analytics tools effectively and efficiently.
5	Learners will be able to use different effective Visualization techniques to represent social media analytics.
6	Acquire the fundamental perspectives and hands-on skills needed to work with social media data.

Module		Content	Hours
1.		Social Media Analytics: An Overview	6
	1.1	Core Characteristics of Social Media, Types of Social Media, Social medialandscape, Need for Social Media Analytics (SMA), SMA in small & large organizations. Purpose of Social Media Analytics, Social Media vs. Traditional Business Analytics, Seven Layers of Social Media Analytics, Types of Social Media Analytics, Social Media Analytics Cycle, Challenges to Social Media Analytics, Social Media Analytics Tools.	
2.		Social Network Structure, Measures & Visualization	6
	2.1	Basics of Social Network Structure - Nodes, Edges & Tie Describing the Networks Measures - Degree Distribution, Density, Connectivity, Centralization, Tie Strength & Trust. Network Visualization - Graph Layout, Visualizing Network features, Scale Issues. Social Media Network Analytics - Common Network Terms, Common Social Media Network Types, Types of Networks, Common Network Terminologies, Network Analytics Tools.	
3.		Social Media Text, Action & Hyperlink Analytics	8
	3.1	Social Media Text Analytics - Types of Social Media Text, Purpose of Text Analytics, Steps in Text Analytics, Social Media Text Analysis Tools. Social Media Action Analytics - What Is Actions Analytics? Common Social Media Actions, Actions Analytics Tools	

		Social Media Hyperlink Analytics - Types of Hyperlinks, Types of Hyperlink Analytics, Hyperlink Analytics Tools	
4		Social Media Location & Search Engine Analytics	6
	4.1	Location Analytics - Sources of Location Data, Categories of Location Analytics, Location Analytics and Privacy Concerns, Location Analytics Tools Search Engine Analytics - Types of Search Engines, Search Engine Analytics, Search Engine Analytics Tools	
5		Social Information Filtering	6
	5.1	Social Information Filtering - Social Sharing and filtering , Automated Recommendation systems, Traditional Vs social Recommendation Systems Understanding Social Media and Business Alignment, Social Media KPI, Formulating a Social Media Strategy, Managing Social Media Risks	
6		Social Media Analytics Applications and Privacy	7
	6.1	Social media in public sector - Analyzing public sector social media, analyzing individual users, case study. Business use of Social Media - Measuring success, Interaction and monitoring, case study. Privacy - Privacy policies, data ownership and maintaining privacy online.

Assessment:	
Internal Assessment:	
Assessment consists of two class tests of 20 marks each. The first-class test is to be conducted when approx. 40% syllabus is completed and second class test when additional 40% syllabus is completed. Duration of each test shall be one hour.	
End Semester Theory Examination:	
1	Question paper will consist of 6 questions, each carrying 20 marks.
2	The students need to solve a total of 4 questions.
3	Question No.1 will be compulsory and based on the entire syllabus.
4	Remaining question (Q.2 to Q.6) will be selected from all the modules.

Course Code	Course Name	Credits
ILO8021	Project Management	03

Course Objectives:	
1	To familiarize the students with the use of a structured methodology/approach for each and every unique project undertaken, including utilizing project management concepts, tools and techniques.
2	To appraise the students with the project management life cycle and make them knowledgeable about the various phases from project initiation through closure.
Course Outcomes:	
1	Apply selection criteria and select an appropriate project from different options.
2	Write work break down structure for a project and develop a schedule based on it.
3	Identify opportunities and threats to the project and decide an approach to deal with them strategically.
4	Use Earned value technique and determine & predict status of the project.
5	Capture lessons learned during project phases and document them for future reference

Module		Contents	Hours
1		Project Management Foundation	5
	1.1	Definition of a project, Project Vs Operations, Necessity of project management, Triple constraints, Project life cycles (typical & atypical) Project phases and stage gate process. Role of project manager. Negotiations and resolving conflicts. Project management in various organization structures. PM knowledge areas as per Project Management Institute (PMI).	
2		Initiating Projects	6
	2.1	How to get a project started, selecting project strategically, Project selection models (Numeric /Scoring Models and Non-numeric models), Project portfolio process, Project sponsor and creating charter; Project proposal. Effective project team, Stages of team development & growth (forming, storming, norming & performing), team dynamics.	
3		Project Planning and Scheduling	8
	3.1	Work Breakdown structure (WBS) and linear responsibility chart, Interface Co- ordination and concurrent engineering, Project cost estimation and budgeting, Top down and bottoms up budgeting, Networking and Scheduling techniques. PERT, CPM, GANTT chart. Introduction to Project Management Information System (PMIS).	
4		Planning Projects	6
	4.1	Crashing project time, Resource loading and leveling, Goldratt's critical chain, Project Work Stakeholders and Communication plan. Risk Management in projects: Risk management planning, Risk identification and risk register. Qualitative and quantitative risk assessment, Probability and impact matrix. Risk response strategies for positive and negative risks	
5	5.1	Executing Projects: Planning monitoring and controlling cycle. Information needs and reporting, engaging with all stakeholders of the projects. Team management, communication and project meetings.	8
	5.2	Monitoring and Controlling Projects: Earned Value Management techniques for measuring value of work completed; Using milestones for measurement; change requests and scope creep. Project audit.	
	5.3	Project Contracting: Project procurement management, contracting and outsourcing,	
	6.1	Project Leadership and Ethics:	

6	6.2	Introduction to project leadership, ethics in projects. Multicultural and virtual projects. Closing the Project: Customer acceptance; Reasons of project termination, Various types of project terminations (Extinction, Addition, Integration, Starvation), Process of project termination, completing a final report; doing a lessons learned analysis; acknowledging successes and failures; Project management templates and other resources; Managing without authority; Areas of further study	6

Internal Assessment:

Assessment consists of two tests out of which; one should be compulsory class test and the other is either a class test or assignment on live problems or course project.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. **In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.**

1	Question paper will comprise of total six question
2	All question carries equal marks
3	Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
4	Only Four question need to be solved.

Course Code	Course Name	Credits
ILO8022	Finance Management	03

Course Objectives:

1	Overview of Indian financial system, instruments and market
2	Basic concepts of value of money, returns and risks, corporate finance, working capital and its management
3	Knowledge about sources of finance, capital structure, dividend policy

Course Outcomes:

1	Understand Indian finance system and corporate finance
2	Take investment, finance as well as dividend decisions

Module		Contents	Hours
1	1.1	Overview of Indian Financial System: Characteristics, Components and Functions of Financial System.	6
	1.2	Financial Instruments: Meaning, Characteristics and Classification of Basic Financial Instruments -- Equity Shares, Preference Shares, Bonds-Debentures, Certificates of Deposit, and Treasury Bills.	
	1.3	Financial Markets: Meaning, Characteristics and Classification of Financial Markets-- Capital Market, Money Market and Foreign Currency Market	
	1.4	Financial Institutions: Meaning, Characteristics and Classification of Financial Institutions -- Commercial Banks, Investment-Merchant Banks and Stock Exchanges	
2	2.1	Concepts of Returns and Risks: Measurement of Historical Returns and Expected Returns of a Single Security and a Two-security Portfolio; Measurement of Historical Risk and Expected Risk of a Single Security and a Two-security Portfolio.	6
	2.2	Time Value of Money: Future Value of a Lump Sum, Ordinary Annuity, and Annuity Due; Present Value of a Lump Sum, Ordinary Annuity, and Annuity Due; Continuous Compounding and Continuous Discounting.	
3	3.1	Overview of Corporate Finance: Objectives of Corporate Finance; Functions of Corporate Finance— Investment Decision, Financing Decision, and Dividend Decision.	9
	3.2	Financial Ratio Analysis: Overview of Financial Statements—Balance Sheet, Profit and Loss Account, and Cash Flow Statement; Purpose of Financial Ratio Analysis; Liquidity Ratios; Efficiency or Activity Ratios; Profitability Ratios; Capital Structure Ratios; Stock Market Ratios; Limitations of Ratio Analysis.	

4	4.1	Capital Budgeting: Meaning and Importance of Capital Budgeting; Inputs for Capital Budgeting Decisions; Investment Appraisal Criterion—Accounting Rate of Return, Payback Period, Discounted Payback Period, Net Present Value(NPV), Profitability Index, Internal Rate of Return (IRR), and Modified Internal Rate of Return (MIRR)	10
	4.2	Working Capital Management: Concepts of Meaning Working Capital; Importance of Working Capital Management; Factors Affecting an Entity's Working Capital Needs; Estimation of Working Capital Requirements; Management of Inventories; Management of Receivables; and Management of Cash and Marketable Securities.	
5	5.1	Sources of Finance: Long Term Sources—Equity, Debt, and Hybrids; Mezzanine Finance; Sources of Short Term Finance—Trade Credit, Bank Finance, Commercial Paper; Project Finance.	5
	5.2	Capital Structure: Factors Affecting an Entity's Capital Structure; Overview of Capital Structure Theories and Approaches— Net Income Approach, Net Operating Income Approach; Traditional Approach, and Modigliani-Miller Approach. Relation between Capital Structure and Corporate Value; Concept of Optimal Capital Structure	
6	6.1	Dividend Policy: Meaning and Importance of Dividend Policy; Factors Affecting an Entity's Dividend Decision; Overview of Dividend Policy Theories and Approaches— Gordon's Approach, Walter's Approach, and Modigliani- Miller Approach.	3

Course Code	Course Name	Credits
ILO8024	Human Resource Management	03

Course Objectives:	
1	To introduce the students with basic concepts, techniques and practices of the human resource management.
2	To provide opportunity of learning Human resource management (HRM) processes, related with the functions, and challenges in the emerging perspective of today's organizations.
3	To familiarize the students about the latest developments, trends & different aspects of HRM.
4	To acquaint the student with the importance of inter-personal & inter-group behavioral skills in an organizational setting required for future stable engineers, leaders and managers.
Course Outcomes:	
1	Understand the concepts, aspects, techniques and practices of the human resource management.
2	Understand the Human resource management (HRM) processes, functions, changes and challenges in today's emerging organizational perspective.
3	Gain knowledge about the latest developments and trends in HRM.
4	Apply the knowledge of behavioral skills learnt and integrate it with in inter personal and intergroup environment emerging as future stable engineers and managers.

Module	Contents	Hours
1	1.1 Introduction to HR Human Resource Management- Concept, Scope and Importance, Interdisciplinary Approach Relationship with other Sciences, Competencies of HR Manager, HRM functions. Human resource development (HRD): changing role of HRM – Human resource Planning, Technological change, Restructuring and rightsizing, Empowerment, TQM, Managing ethical issues.	5
2	Organizational Behavior (OB)	
	2.1 Introduction to OB Origin, Nature and Scope of Organizational Behavior, Relevance to Organizational Effectiveness and Contemporary issues. 2.2 Personality: Meaning and Determinants of Personality, Personality development, Personality Types, Assessment of Personality Traits for Increasing Self Awareness 2.3 Perception: Attitude and Value, Effect of perception on Individual Decision-making, Attitude and Behavior. 2.4 Motivation: Theories of Motivation and their Applications for Behavioral Change (Maslow, Herzberg, McGregor); 2.5 Group Behavior and Group Dynamics: Work groups formal and informal groups and stages of group development. Team Effectiveness: High performing teams, Team Roles, cross functional and self-directed team. Case study	7
3	Organizational Structure & Design	6
	3.1 Structure, size, technology, Environment of organization; Organizational Roles & conflicts: Concept of roles; role dynamics; role conflicts and stress. 3.2 Leadership: Concepts and skills of leadership, Leadership and managerial roles, Leadership styles and contemporary issues in leadership. 3.3 Power and Politics: Sources and uses of power; Politics at workplace, Tactics and strategies.	

4	4.1	Human resource Planning Recruitment and Selection process, Job-enrichment, Empowerment - Job-Satisfaction, employee morale.	5
	4.2	Performance Appraisal Systems: Traditional & modern methods, Performance Counseling, Career Planning.	
	4.3	Training & Development: Identification of Training Needs, Training Methods	
5		Emerging Trends in HR	6
	5.1	Organizational development; Business Process Re-engineering (BPR), BPR as a tool for organizational development , managing processes & transformation in HR. Organizational Change, Culture, Environment	
	5.2	Cross Cultural Leadership and Decision Making; Cross Cultural Communication and diversity at work, Causes of diversity, managing diversity with special reference to handicapped, women and ageing people, intra company cultural difference in employee motivation.	
6	6.1	HR & MIS Need, purpose, objective and role of information system in HR, Applications in HRD in various industries (e.g. manufacturing R&D, Public Transport, Hospitals, Hotels and service industries	10
	6.2	Strategic HRM Role of Strategic HRM in the modern business world, Concept of Strategy, Strategic Management Process, Approaches to Strategic Decision Making; Strategic Intent – Corporate Mission, Vision, Objectives and Goals	
	6.3	Labor Laws & Industrial Relations Evolution of IR, IR issues in organizations, Overview of Labor Laws in India; Industrial Disputes Act, Trade Unions Act, Shops and Establishments Act

ILO8028	Digital Business Management	03

Course Objectives:	
1	To familiarize with digital business concept
2	To acquaint with E-commerce
3	To give insights into E-business and its strategies
Course Outcomes:	
1	Identify drivers of digital business
2	Illustrate various approaches and techniques for E-business and management
3	Prepare E-business plan

Module		Content	Hours
01	1.1	Introduction to Digital Business Introduction, Background and current status, E-market places, structures, mechanisms, economics and impacts. Difference between physical economy and digital economy,	09
	1.2	Drivers of digital business Big Data & Analytics, Mobile, Cloud Computing, Social media, BYOD, and Internet of Things (digitally intelligent machines/services) Opportunities and Challenges in Digital Business.	
02	2.1	Overview of E-Commerce E-Commerce- Meaning, Retailing in e-commerce-products and services, consumer behavior, market research and advertisement B2B-E-commerce-selling and buying in private e-markets, public B2B exchanges and support services, e-supply chains, Collaborative Commerce, Intra business EC and Corporate portals Other E-C models and applications, innovative EC System-From E-government and learning to C2C, mobile commerce and pervasive computing	06
	2.2	EC Strategy and Implementation EC strategy and global EC, Economics and Justification of EC, Using Affiliate marketing to promote your e-commerce business, Launching a successful online business and EC project, Legal, Ethics and Societal impacts of EC	
03	3.1	Digital Business Support services ERP as e-business backbone, knowledge Top Apps, Information and referral system	06
	3.2	Application Development: Building Digital Business Applications and Infrastructure	

04	4.1	Managing E-Business Managing Knowledge, Management skills for e-business, Managing Risks in e-business	06
	4.2	Security Threats to e-business Security Overview, Electronic Commerce Threats, Encryption, Cryptography, Public Key and Private Key Cryptography, Digital Signatures, Digital Certificates, Security Protocols over Public Networks: HTTP, SSL, Firewall as Security Control, Public Key Infrastructure (PKI) for Security, Prominent Cryptographic Applications	
05	5.1	E-Business Strategy E-business Strategic formulation- Analysis of Company's Internal and external environment, Selection of strategy, E-business strategy into Action, challenges and E-Transition (Process of Digital Transformation)	04
06	6.1	Materializing e-business: From Idea to Realization Business plan preparation	08
	6.2	Case Studies and presentations

Internal Assessment:

Assessment consists of two tests out of which; one should be compulsory class test and the other is either a class test or assignment on live problems or course project.

End Semester Theory Examination:

Some guidelines for setting up the question paper. Minimum 80% syllabus should be covered in question papers of end semester examination. **In question paper weightage of each module will be proportional to number of respective lecture hours as mention in the syllabus.**

1	Question paper will comprise of total six question
2	All question carries equal marks
3	Questions will be mixed in nature (for example supposed Q.2 has part (a) from module 3 then part (b) will be from any module other than module 3)
4	Only Four question need to be solved.

Course Code	Course Name	Credits
ILO8029	Environmental Management	03

Course Objectives:

1	Understand and identify environmental issues relevant to India and global concerns
2	Learn concepts of ecology
3	Familiarise environment related legislations

Course Outcomes:

1	Understand the concept of environmental management
2	Understand ecosystem and interdependence, food chain etc.
3	Understand and interpret environment related legislations

Module		Detailed Contents	Hrs
01	1.1	Introduction and Definition of Environment Significance of Environment Management for contemporary managers, Career opportunities. Environmental issues relevant to India, Sustainable Development, The Energy scenario.	10
02	2.1	Global Environmental concerns Global Warming, Acid Rain, Ozone Depletion, Hazardous Wastes, Endangered life-species, Loss of Biodiversity, Industrial/Man-made disasters, Atomic/Biomedical hazards, etc.	06
03	3.1	Concepts of Ecology Ecosystems and interdependence between living organisms, habitats, limiting factors, carrying capacity, food chain, etc.	05
04	4.1	Scope of Environment Management, Role & functions of Government as a planning and regulating agency. Environment Quality Management and Corporate Environmental Responsibility	10
05	5.1	Total Quality Environmental Management, ISO-14000, EMS certification.	05
06	6.1	General overview of major legislations like Environment Protection Act, Air (P & CP) Act, Water (P & CP) Act, Wildlife Protection Act, Forest Act, Factories Act, etc.	03

Course Code:	Course Title	Credit
CSL801	Advanced AI Lab	01

Prerequisite: Python/MATLAB	
Lab Objectives:	
1	To implement Generative and Probabilistic models and understand its working
2	To analyse the Architecture and Training process of Autoencoders.
3	To apply the concepts of transfer learning towards useful outcomes.
4	To demonstrate the application of ensemble learning.
5	To realise the penetration of Nascent AI technologies in real life applications.
Lab Outcomes: At the end of the course, the students will be able to	
1	Implement Generative and Probabilistic models and understand its working.
2	Build and Train Autoencoders models.
3	Solving real life problems using transfer learning.
4	Design models based on ensemble learning approach.
5	Conceptualise the designs and advancement of AI technologies in real life applications.

Suggested Experiments:	
Sr. No.	Name of the Experiment
1	Design and implement a Hidden Markov Models for outcome prediction.
2	Design and implement a Bayesian Network for outcome prediction.
3	Design and implement a Gaussian Mixture Models for outcome prediction.
4	Build and Train a Generative Multi-Layer Network Model using appropriate dataset.
5	Build and Train a Deep Convolution Generative Multi-Layer (DCGAN) Network Model for an image based dataset.
6	Develop a Conditional GAN (CGAN) Network to direct the image generation process of the generator model.
7	Train a variational autoencoder using Tensorflow on Fashion MNIST

8	Explore the working of any pre-trained model towards outcome generation.
9	Implement and analyze the working of Local Interpretable Model-agnostic Explanations(LIME) supervised model.
10	Case-study on the emerging technologies in AI like Metaverse, Augmented reality etc.
11	Mini Project Report: For any one chosen real world application as per the syllabus of CSC801 : Advanced AI.
12	Implementation and Presentation of Mini Project

Term Work:	
1	Term work should consist of any 06 experiments, 1 case study, Mini Project.
2	Journal must include at least 2 assignments based on Theory and Practical's.
3	The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work.
4	Total 25 Marks (Experiments: 15-marks, Attendance Theory & Practical: 05-marks, Assignments: 05-marks)
Oral exam	
	Oral examination on the entire syllabus of CSC801 and CSL801

Lab Code	Lab Name	Credit
CSDOL8011	AI for financial & Banking application Lab	1

Prerequisite: Python Programming, Deep Learning, Machine Learning.	
Lab Objectives: Students will try	
1	To implement digital money transfer systems in the banking sector.
2	To calculate risk-adjusted performance measures for investment portfolios.
3	To apply cluster analysis to identify patterns in financial data.
4	To analyze market sentiment using the Markov regime switching model.
5	To design and backtest trading algorithms for financial markets
6	To detect and prevent fraudulent activities using fraud analytics techniques
Lab Outcomes: At the end of the course, the students will be able to	
1	Proficiency in implementing secure and efficient digital money transfer systems.
2	Ability to assess investment performance using risk-adjusted measures.
3	Competence in identifying meaningful patterns and segments in financial data.
4	Understanding of market sentiment and its impact on trading decisions.
5	Practical skills in developing and evaluating trading algorithms.
6	Knowledge of fraud detection methods for financial systems.

Suggested List of Experiments	
1.	Setting up a Digital Money Transfer System
2.	Calculating Sharpe Ratios for Investment Portfolios
3.	Cluster Analysis of Financial Data for Market Segmentation
4.	Analyzing Market Sentiment using the Markov Regime Switching Model
5.	Developing and Backtesting a Simple Trading Algorithm
6.	Implementing Advanced Risk Management Techniques in Trading Algorithms
7.	Fraud Detection using Machine Learning Algorithms
8.	Visualizing Fraud Patterns and Analytics
9.	Designing and Backtesting Complex Trading Strategies
10.	Evaluating and Enhancing the Performance of Trading Algorithms
11.	Applying Machine Learning for Predictive Fraud Analytics

Textbooks:

Term Work:	
1	Term work should consist of 10 experiments and 2 assignments.
2	The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work.
3	The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work. Total 25 Marks (Experiments and Project: 15-marks, Attendance(Theory & Practical): 05-marks, Assignment: 05-marks)
Practical and Oral exam	
	Oral examination on the entire syllabus of CSDO8011 & CSDOL8011

Lab Code	Lab Name	Credit
CSDOL8012	Quantum Computing Lab	1

Prerequisite: Python Programming Language.

Lab Objectives:

1	To implement fundamental quantum computing concepts
2	To learn quantum computation and quantum information
3	To understand quantum entanglement, quantum algorithms
4	To understand quantum information theory and channels

Lab Outcomes: Students will be able to

1	Implement basic quantum computing logic by building dice and random numbers using open source simulation tools.
2	Understand quantum logic gates using open source simulation tools.
3	Implement quantum circuits using open source simulation tools.
4	Implement quantum algorithms using open source simulation tools.

Suggested Experiments: Students are required to complete at least 10 experiments. Faculty may develop their own set of experiments for students. List below is only suggestive.

Sr. No.	Name of the Experiment
1	Building Quantum dice
2	Building Quantum Random No. Generation
3	Composing simple quantum circuits with q-gates and measuring the output into classical bits.
4	Implementation of Shor's Algorithms
5	Implementation of Grover's Algorithm
6	Implementation of Deutsch's Algorithm
7	Implementation of Deutsch-Jozsa's Algorithm
8	Quantum Circuits
9	Qubit Gates
10	Bell Circuit & GHZ Circuit
11	Accuracy of Quantum Phase Estimation
12	Mini Project such as implementing an API for efficient search using Grover's Algorithms or Integer factorization using Shor's Algorithm.

5	Qiskit Labs IBM https://learn.qiskit.org/course/ch-labs/lab-1-quantum-circuits

Term Work:	
1	Term work should consist of 10 experiments.
2	Journal must include at least 2 assignments.
3	The final certification and acceptance of term work ensures that satisfactory performance of laboratory work and minimum passing marks in term work.
4	Total 25 Marks (Experiments: 15-marks, Attendance Theory & Practical: 05-marks, Assignments: 05-marks)
Oral & Practical exam:	
Oral examination based on the entire syllabus of CSDO8012 and CSDOL8012	

Course Code:	Course Title	Credit
CSDOL8013	Reinforcement Learning Lab	1

Prerequisite: Python Programming, Deep Learning, Machine Learning.

Lab Objectives: Students will try

1	Introduce the fundamentals of reinforcement learning and problem formulation using MDPs and Bandit problems
2	Explore different exploration strategies and their impact on online learning scenarios.
3	Understand dynamic programming algorithms for solving Markov Decision Processes.
4	Apply dynamic programming techniques to solve small-scale MDP problems
5	Implement and compare Monte Carlo methods and Temporal-Difference learning algorithms.
6	Explore real-world applications of reinforcement learning in domains such as autonomous driving or robotics

Lab Outcomes: At the end of the course, the students will be able to

1	Gain a solid understanding of reinforcement learning concepts and problem formulation.
2	Evaluate and compare exploration strategies in online learning scenarios.
3	Solve Markov Decision Processes using dynamic programming algorithms
4	Apply dynamic programming techniques to solve small-scale MDP problems.
5	Implement and analyze Monte Carlo methods and Temporal-Difference learning algorithms
6	Explore practical applications of reinforcement learning in real-world domains.

Suggested List of Experiments

1.	Implementing a simple grid-world environment and training an agent using basic Q-learning.
2.	Implementing a multi-armed bandit problem and comparing different exploration strategies like epsilon-greedy and UCB.
3,	Implementing a basic grid-world environment as an MDP and applying policy iteration and value iteration algorithms to find optimal policies.
4.	Applying dynamic programming algorithms, such as policy evaluation and policy improvement, to solve a small-scale MDP problem.
5.	Implementing Monte Carlo control and Temporal Difference (TD) learning algorithms to train an agent in a grid-world environment.
6.	Exploration vs. Exploitation Trade-off: Experimenting with different exploration strategies and analyzing their impact on the learning performance of an agent in a bandit problem.
7.	Function Approximation in Reinforcement Learning: Using function approximation

	techniques, such as linear regression or neural networks, to approximate value functions in reinforcement learning problems.
8.	Deep Reinforcement Learning: Implementing a deep Q-network (DQN) to train an agent to play a popular Atari game, such as Pong or Space Invaders.
9.	Transfer Learning and Multi-Task Reinforcement Learning: Investigating transfer learning in reinforcement learning by training an agent in one environment and transferring its knowledge to a different but related environment
10.	Policy Gradient Methods: Implementing policy gradient methods, such as REINFORCE or Proximal Policy Optimization (PPO), to train an agent in a continuous control environment.
*11.	Applications and Case Studies: Applying reinforcement learning techniques to solve a real-world problem, such as training a self-driving car to navigate a simulated road environment.

Term Work:	
1	Term work should consist of any 8 experiments, 1 case study and 2 assignments.
2	The final certification and acceptance of term work ensures satisfactory performance o

	laboratory work and minimum passing marks in term work.
3	The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work. Total 25 Marks (Experiments and Project: 15-marks, Attendance(Theory & Practical): 05-marks, Assignment: 05-marks)
Oral exam	
	Oral Examination based on the entire syllabus of CSDO8013 and CSL8013

Lab Code	Lab Name	Credit
CSDOL8021	Graph Data ScienceLab	1

Lab Objectives: Students will try	
1	To understand graph database fundamentals and their advantages.
2	To design and implement effective data models using the labeled property graph model.
3	To develop proficiency in querying and analyzing graph data using Cypher.
4	To gain knowledge of graph database administration tasks and data management.
5	To apply graph database techniques to real-world use cases.
6	To develop practical skills in graph database application development.
Lab Outcomes: At the end of the course, the students will be able to	
1	Comprehensive understanding of graph databases and their benefits.
2	Proficiency in creating data models for representing complex relationships.
3	Ability to write efficient queries and analyze graph data effectively.
4	Competence in administering and managing graph databases.
5	Application of graph database techniques to solve real-world problems.
6	Understand developing graph database applications.

Prerequisite: Python Programming, Deep Learning, Machine Learning.

Suggested List of Experiments	
1.	Graph Database Fundamentals: <ul style="list-style-type: none"> o Install and set up a graph database system (e.g., Neo4j) on a local machine. o Familiarize yourself with the graph database environment, including the query language (Cypher) and browser interface.

2.	<p>Data Modeling with Graphs:</p> <ul style="list-style-type: none"> ◦ Design a data model using the labeled property graph model for a specific domain (e.g., social network, e-commerce). ◦ Implement the data model in the graph database and populate it with sample data.
3,	<p>Basic Graph Queries:</p> <ul style="list-style-type: none"> ◦ Perform basic graph queries using Cypher to retrieve nodes, relationships, and their properties. ◦ Explore different query patterns, such as finding paths, filtering nodes, and ordering results.
4.	<p>Advanced Graph Queries:</p> <ul style="list-style-type: none"> ◦ Extend your query knowledge by performing more complex graph queries, including subgraph matching, aggregation, and conditional filtering. ◦ Optimize query performance by understanding and utilizing indexes.
5.	<p>Graph Database Administration:</p> <ul style="list-style-type: none"> ◦ Learn and practice essential administrative tasks, such as managing users, roles, and access control. ◦ Perform backup and restore operations to ensure data integrity.
6.	<p>Importing and Exporting Data:</p> <ul style="list-style-type: none"> ◦ Import data from external sources (e.g., CSV files) into the graph database. ◦ Export graph data to different formats for analysis or sharing.
7.	<p>Graph Algorithms and Analytics:</p> <ul style="list-style-type: none"> ◦ Explore the built-in graph algorithms provided by the graph database system (e.g., centrality, community detection). ◦ Apply graph algorithms to analyze and extract insights from your graph data
8.	<p>Graph Visualization and Exploration:</p> <ul style="list-style-type: none"> ◦ Utilize visualization tools and libraries to visualize your graph data. ◦ Explore and navigate the graph visually to gain a better understanding of its structure and relationships.
9.	<p>Performance Optimization:</p> <ul style="list-style-type: none"> ◦ Identify and address performance bottlenecks in your graph database application. ◦ Optimize queries, indexes, and data modeling to improve overall system

	performance.
10.	<p>Scaling and Replication:</p> <ul style="list-style-type: none"> ◦ Learn techniques for scaling and replicating a graph database to handle larger datasets and higher workloads. ◦ Implement and test replication strategies to ensure data availability and fault tolerance.
*11.	<p>Real-World Use Cases:</p> <ul style="list-style-type: none"> ◦ Choose a specific real-world use case (e.g., recommendation systems, fraud detection) and apply graph database techniques to solve the problem. ◦ Design and implement a graph database application that addresses the unique requirements of the chosen use case.

2	The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work.
3	The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work. Total 25 Marks (Experiments and Project: 15-marks, Attendance(Theory & Practical): 05-marks, Assignment: 05-marks)
Oral exam	
	Oral examination on the entire syllabus of CSDO8021 and CSDOL8021

Course Code:	Course Title	Credit
CSDOL8022	Recommendation Systems Lab	1

Prerequisite: Java/Python	
Lab Objectives:	
1	To understand the key concepts of Recommendation systems.
2	Design and implement cluster-based approaches for recommendation systems.
3	Design, implement and analyze classification algorithms for recommendation systems.
4	To understand various Recommendation system Algorithms.
5	To understand data processing for Recommendation system Algorithms
Lab Outcomes: At the end of the course, the students will be able to	
1	Understand mathematics and representation of data for recommendation systems.
2	Design, implement and analyze Collaborative filtering based for recommendation systems.
3	Design, implement and analyze Content-based recommendation systems.
4	Design, implement and analyze Knowledge-based recommendation systems.
5	Understanding feature engineering and pre-processing for recommendation systems.
6	To solve real world problems using recommendation systems.

Suggested Experiments:	
Sr. No.	Name of the Experiment
1	Implementation of Matrix operations and data representation towards understanding mathematics for recommendation system
2	Experiment on the role of clustering methods with respect to recommendation systems
3	Feature engineering and pre-processing of data for recommendation systems.
4	Implementation of Bayes classifier for recommendation.
5	Implement User-based Nearest neighbor recommendation.
6	Implement Item-based Nearest neighbor recommendation
7	Implement Content-based recommendation system.
8	Implement Knowledge-based recommendation system.

9	Implementation of a recommendation system using Hybrid approach.
10	Implementation of a recommendation system using Ensembled approach.
11	Implementation of a Regression based recommendation system.
12	Analyze results on the basis of different evaluation parameters and graphical representations for recommendation systems.
13	Mini Project Report: For any one chosen real world Recommendation systems application.
14	Implementation and Presentation of Mini Project

Term Work:	
1	Term work should consist of any 08 experiments and mini project
2	Journal must include at least 2 assignments based on Theory and Practical's
3	The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work.
4	Total 25 Marks (Experiments: 15-marks, Attendance Theory & Practical: 05-marks, Assignments: 05-marks)
Oral exam:	
	Oral examination based on the entire syllabus of CSDO8022 and CSL8022

Lab Code	Lab Name	Credit
CSDOL8023	Social Media Analytics Lab	1

Prerequisite: Types of Graphs, Data Mining, Data Analytics	
Lab Objectives:	
1	To understand the fundamental concepts of social media networks.
2	To learn various social media analytics tools and evaluation matrices.
3	To collect and store social media data.
4	To analyze and visualize social media data
5	To design and develop social media analytics models.
6	To design and build a social media analytics application.
Lab Outcomes: The students will be able to	
1	Understand characteristics and types of social media networks.
2	Use social media analytics tools for business
3	Collect, monitor , store and track social media data
4	Analyze and visualize social media data from multiple platforms
5	Design and develop content and structure based social media analytics models.
6.	Design and implement social media analytics applications for business.

Suggested Experiments:	
Sr. No.	Name of the Experiment
1	Study various - i) Social Media platforms (Facebook, twitter, YouTubeetc) ii) Social Media analytics tools (Facebook insights, google analytics net lyticetc) iii) Social Media Analytics techniques and engagement metrics (page level, post level, member level) iv) Applications of Social media analytics for business. e.g. Google Analytics https://marketingplatform.google.com/about/analytics/ https://netlytic.org/
2	Data Collection-Select the social media platforms of your choice (Twitter, Facebook, LinkedIn, YouTube, Web blogs etc) ,connect to and capture social media data for business (scraping, crawling, parsing).

3	Data Cleaning and Storage- Preprocess, filter and store social media data for business (Using Python, MongoDB, R, etc).
4	Exploratory Data Analysis and visualization of Social Media Data for business.
5	Develop Content (text, emoticons, image, audio, video) based social media analytics model for business. (e.g. Content Based Analysis :Topic , Issue ,Trend, sentiment/opinion analysis, audio, video, image analytics)
6	Develop Structure based social media analytics model for any business. (e.g. Structure Based Models -community detection, influence analysis)
7	Develop a dashboard and reporting tool based on real time social media data.
8	Design the creative content for promotion of your business on social media
	platform.
9	Analyze competitor activities using social media data.
10	Develop social media text analytics models for improving existing product/ service by analyzing customer's reviews/comments.

Reference Books:

1	Python Social Media Analytics: Analyze and visualize data from Twitter, YouTube, GitHub, and more Kindle Edition by Siddhartha Chatterjee , Michal Krystyanczuk

5	Charu Aggarwal (ed.), Social Network Data Analytics, Springer, 2011

Term Work:

1	Term work should consist of 10 experiments.
2	Journal must include at least 2 assignments.
3	The final certification and acceptance of term work ensures satisfactory performance of laboratory work and minimum passing marks in term work.
4	Total 25 Marks (Experiments: 15-marks, Attendance Theory & Practical: 05-marks, Assignments: 05-marks)

Practical and Oral Exam

Oral examination based on the entire syllabus of **CSDC8023** and **CSDL80223**

Course Code:	Course Title	Credit
CSP801	Major Project 2	6

Course Objectives:	
1	To acquaint with the process of identifying the needs and converting it into the problem.
2	To familiarize the process of solving the problem in a group.
3	To acquaint with the process of applying basic engineering fundamentals to attempt solutions to the problems.
4	To inculcate the process of self-learning and research.
Course Outcomes:	
1	Identify problems based on societal /research needs.
2	Apply Knowledge and skill to solve societal problems in a group
3	Draw the proper inferences from available results through theoretical/ experimental/simulations
4	Analyse the impact of solutions in societal and environmental context for sustainable development.
5	Demonstrate capabilities of self-learning in a group, which leads to lifelong learning.
6	Demonstrate project management principles during project work.

Guidelines:

1. Internal guide has to keep track of the progress of the project and also has to maintain attendance report. This progress report can be used for awarding term work marks.

2. Project Report Format:

At the end of semester, each group needs to prepare a project report as per the guidelines issued by the University of Mumbai. Report should be submitted in hardcopy. Also, each group should submit softcopy of the report along with project documentation, implementation code, required utilities, software and user Manuals.

A project report should preferably contain at least following details:

- Abstract
- Introduction
- Literature Survey/ Existing system
- Limitation Existing system or research gap
- Problem Statement and Objective
- Proposed System
 - Analysis/Framework/ Algorithm
 - Design details
 - Methodology (your approach to solve the problem) Proposed System
- Experimental Set up

- Details of Database or details about input to systems or selected data
- Performance Evaluation Parameters (for Validation)
- Software and Hardware Setup
- Results and Discussion
- Conclusion and Future Work
- References
- Appendix – List of Publications or certificates

Desirable:

Students should be encouraged -

- to participate in various project competition.
- to write minimum one technical paper & publish in good journal.
- to participate in national / international conference.

3. Term Work:

Distribution of marks for term work shall be done based on following:

- a. Weekly Log Report
- b. Completeness of the project and Project Work Contribution
- c. Project Report (Black Book) (both side print)
- d. Term End Presentation (Internal)

The final certification and acceptance of TW ensures the satisfactory performance on the above aspects.

4. Oral & Practical:

Oral & Practical examination (Final Project Evaluation) of Project 2 should be conducted by Internal and External examiners approved by University of Mumbai at the end of the semester.

Suggested quality evaluation parameters are as following:

- a. Relevance to the specialization / industrial trends
- b. Modern tools used
- c. Innovation
- d. Quality of work and completeness of the project
- e. Validation of results
- f. Impact and business value
- g. Quality of written and oral presentation
- h. Individual as well as teamwork
